

HY.GIENE Australia

Post Covid-19 Reopening

Working together, HY.GIENE Australia are here to assist with your hygiene program post Covid-19

Our technical support team have carefully researched and identified the situation at hand and in conjunction with the following extracts from Australian Health, have listed six key products, capable of disinfecting and sanitising all surfaces throughout your site.

Environmental cleaning and disinfection principles for COVID-19 From Australian Government Dept Health:

Routine environmental cleaning

Cleaning is an essential part of disinfection. Organic matter can inactivate many disinfectants. Cleaning reduces the soil load, allowing the disinfectant to

work. Removal of germs such as the virus that causes COVID-19, requires thorough cleaning followed by disinfection.

The risk of transmission of COVID-19 in the social and non-health care work settings can be minimised through a good standard of general hygiene.

This includes:

- Promoting cough etiquette and respiratory hygiene.
- Routine cleaning of frequently touched hard surfaces with detergent/disinfectant solution/wipe

It is good practice to routinely clean surfaces as follows:

- Clean frequently touched surfaces with detergent solution.
- Clean general surfaces and fittings when visibly soiled

and immediately after any spillage.

Routine environmental cleaning requirements can be divided into two groups:

1. FREQUENTLY TOUCHED SURFACES – Door handles, bedrails, tabletops, light switches, phones, mirrors
2. MINIMALLY TOUCHED SURFACE – Floors, ceilings, walls, blinds Should be cleaned frequently. Detergent solution (as per manufacturer's instructions) can be used, with the exact choice of detergent determined by the nature of surface and likely degree of contamination.

Detergent-impregnated wipes may be used but should not be used as a replacement for the mechanical cleaning process.

Damp mopping is preferable to dry mopping. Walls and blinds should be cleaned when visibly dusty or soiled. Window curtains should be regularly changed in addition to being cleaned when soiled. Sinks and basins should be cleaned on a regular basis.

Promoting HY.GIENE Australia's Reopening Plan will highlight all necessary applications and methods, using the correct product from our range our registered disinfectants.

Use of disinfection • Use freshly made solutions and follow manufacturer's instructions for appropriate dilution and use.

HY.GIENE Australia have a national distributor network in every state to provide local support and delivery.
